

Figure 4.1 — Creating the Vehicle custom object: label, plural label, and API name.

The screenshot shows the Salesforce Setup interface in Developer Edition. The 'Setup' menu is open, and 'Object Manager' is selected. The 'New Custom Object' page is displayed. A yellow banner at the top states: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Get more info](#) [Go to object permissions page](#)'. Below this is the 'Custom Object Definition Edit' section with 'Save', 'Save & New', and 'Cancel' buttons. The 'Custom Object Information' section includes instructions: 'The singular and plural labels are used in tabs, page layouts, and reports.' It contains fields for 'Label' (Vehicle Dealer, Example: Account), 'Plural Label' (Vehicle Dealers, Example: Accounts), and a checkbox for 'Starts with vowel sound'. Another instruction states: 'The Object Name is used when referencing the object via the API.' It includes an 'Object Name' field (Vehicle_Dealer, Example: Account) and a 'Description' text area.

Figure 4.3 — Creating the Vehicle Dealer custom object.

The screenshot shows the 'EDIT' view of the 'New Custom Object' page for 'Vehicle Customer'. The 'Custom Object Information' section is highlighted with a red 'Required Information' icon. It includes the same instructions as Figure 4.3. The 'Label' field is 'Vehicle Customer' (Example: Account), the 'Plural Label' is 'Vehicle Customers' (Example: Accounts), and the 'Starts with vowel sound' checkbox is unchecked. The 'Object Name' field is 'Vehicle_Customer' (Example: Account), and there is a 'Description' text area.

4.2.1 Custom Tabs

A dedicated custom tab was created for every custom object so that each entity is independently navigable within the Lightning application.

Developer Edition

Search Setup

Setup Home Object Manager

SETUP
Tabs

Custom Tabs

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

URL

Allows users to define locations. Includes latitude and longitude components, and can be used to calculate distance.

Allows users to enter any number. Leading zeros are removed.

Allows users to enter a percentage number, for example, "10" and automatically adds the percent sign to the number.

Allows users to enter any phone number. Automatically formats it as a phone number.

Allows users to select a value from a list you define.

Allows users to select multiple values from a list you define.

Allows users to enter any combination of letters and numbers.

Allows users to enter up to 255 characters on separate lines.

Allows users to enter up to 131,072 characters on separate lines.

Allows users to enter formatted text, add images and links. Up to 131,072 characters on separate lines.

Allows users to enter any combination of letters and numbers and store them in encrypted form.

Allows users to enter a local time. For example, "2:40 PM", "14:40", "14:40:00", and "14:40:50.600" are all valid times for this field.

Allows users to enter any valid website address. When users click on the field, the URL will open in a separate browser window.

Run Immediately
Reminder Before Test Drive

Add a scheduled path if you want a flow path to run a certain amount of time after the triggering record is created or updated. That time is based on the triggering event or on a specified date or date/time field in the record. A separate flow interview runs for each scheduled path. Each scheduled path interview is queued to run at the scheduled time, but can be delayed until system resources become available. Path is added to connectors in the canvas.
